Acorus Networks operates its own network and offers a cloud-based protection service with several scrubbing centers in order to detect and mitigate cyber-attacks against networks and websites.

The company is growing at a fast pace, has huge ambitions, and very high standards of quality. You will be pushed outside of your comfort zone.

Acorus Networks is present in several countries and will deploy soon more location in North America, Asia and Europe

What we offer:

- Cutting edge technology: Hardware and software
- Real Lab and Preprod environment
- Access to conference related (or not) to your daily work
- 1 day remote office allowed per week (can be more depending on your profile)
- Free Coffee and more
- PS4/ Xbox One / Wii-U / Baby foot in our office

You will be required to:

- Manage and improve Acorus backbone and customer infrastructure
- Set up supervision
- Assist engineering team to deploy new pops around the world
- Write the template file for new customers / equipments in order to have everything automated in our systems
- Manage ticketing and help customers
- Troubleshooting
- Participate in conference
- Enjoy life

All technical staff must have the following prerequisites:

- Autonomous in project delivery
- Strong communication skills and empathy
- Continuous learning mindset
- Self-motivated
- Ability to understand the business and propose evolutions
- A good level of English (written and spoken)

The position requires the following skills:

- Experience on network administration (BGP/OSPF)
- Familiar with system administration
- Knowledge of Juniper or Cisco configuration (routing)
- Knowledge of scripting (Bash, Python, Go, and more)
- Ability to rapidly learn new ... Stuff. By Stuff, we mean anything that will improve your day-to-day job or help to keep the company UpToDate
- Always think "What happens if this fails?"
- Battle experience with a nerf gun

Nice to have:

- Experience in a large-scale production environment
- Good understanding of modern security philosophy and behavioral analysis methods
- Familiar with configuration management platforms like Ansible or Salt.

Environment:

- Juniper (BGP/EVPN/OSPF)
- A10 (layer 4 to 7)
- Adva (DWDM Metro)
- Ansible / Napalm / Kafka / Python

Benefits:

- Salary: between 42k€ and 48k€
- Equity
- Restaurant tickets
- Great insurance cover
- Relaxed and friendly culture

Office based in Nanterre. Availability: Now

We are not looking for the highest grade but people who are motivated.
